

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + Refrain from automated querying Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at http://books.google.com/

NINTH ANNUAL REPORT

OF THE

BOARD OF GOVERNORS

OF THE ALMS HOUSE.

Office of the Board of Governors of the Alms House, New York, December 81st, 1857.

To the SECRETARY OF STATE of the State of New York, and the COMMON COUNCIL of the City of New York.

The Governors of the Alms House present herewith the Reports of the Wardens, Superintendents, Resident Physicians, and Storekeepers having charge of the various institutions composing the Alms House Department of the City of New York, which embraces the following: Alms House, Bellevue Hospital, Island, Alms House and Small Pox Hospitals, City Prisons, Lunatic Asylum, Nursery Department,

Randall's Island, City Cemetery, Store Houses, Blackwell's and Randall's Islands, Work House and Penitentiary; also, the Colored Home and Colored Orphan Asylum.

By reference to these reports, the condition of their respective institutions are set forth, and the Board of Governors are fully satisfied that the administration of them is such as to entitle them to their approbation, presenting as they do a cleanly and healthy abode for those who seek them as a refuge from poverty, and furnishing all the needful care and proper medical attention to those stricken with disease.

The completion of the enlargement of Bellevue Hospital will furnish accommodations for a larger number of patients than any other institution in the Union, and the arrangements made for heating and ventilation are such as will prove most beneficial to the inmates, and the enlargement will enable a proper classification and separation of the different forms of disease.

The Small Pox Hospital on Blackwell's Island has to the fullest extent met the expectations of the

Governors: yet, while this disease has existed in the City to a considerable extent, it is rather surprising that so few of those in a respectable station of society have availed themselves of the advantages It is a stone building, situated of this institution. on the southern extremity of the Island, 104 feet by 44 feet, three stories high, the upper story divided into private rooms with hot and cold water, and other conveniences for pay patients, with the best of nursing and medical attendance, as well as comfort and privacy. During the prevalence of the disease in the City the number of patients at any one time in this Hospital has not exceeded thirty, and these were of a class who were compelled from necessity to become inmates, while the large number of deaths reported weekly in the City shows that Small Pox was and is prevailing to a considerable extent.

The enlargement of the Penitentiary on Blackwell's Island has been commenced by the building of one wing solely by prison labor, and some progress has been made in its construction.

It will consist of two wings, four tiers high, extending at right angles with western form of pres-

ent wings, 144 feet in length by 50 feet in width; each wing accommodating 160 prisoners.

The Out-Door Poor Department has already experienced the effect occasioned by the difficulties in our monetary affairs, producing almost a total stagnation of all kinds of mechanical and other laborious employment, in consequence of which the applications for relief have become very numerous, and from a class who never before were recipients of the charity of the City, while many have committed themselves to the Work House from their inability to obtain employment to enable them to earn sufficient for their ordinary support; and as the severe weather approaches the indications are that the applications for out-door relief will exceed that of any former period. The Board of Governors, meanwhile, holding themselves in readiness to afford that aid and care to the sick and needy which a due discharge of their duties as Almoners of the City's charities may require.

The following comparative statement of the number in the several institutions on the last Saturday of 1856 and 1857, will show a large increase of inmates:

To the BOARD OF GOVERNORS of the Alms House:

The Medical Board of Bellevue Hospital beg leave to present the following as their Annual Report for the year ending December 31, 1857:

The whole number of persons under treatment during the year was seven thousand seven hundred and seventy-six.

Of these, six hundred and sixty-seven have died, making a ratio of mortality in the whole number treated of a fraction over nine per cent.

Three hundred and fifty-three children have been born.

Our inspection of the list setting forth the causes of death will show, at a glance, that the immense majority of the cases were of diseases necessarily fatal by their nature, such as results of chronic intoxication, organic disease of the kidneys, and pulmonary consumption.

The increased facilities so bountifully supplied to the medical staff by your honorable body, for the treatment of our patients, will no doubt be greatly conducive to the welfare of the sick poor placed under our charge, and, we trust, will enable us to effect a still greater reduction in the per centage of mortality than is shown in our present report.

The improvements in the wards, since the completion of the additional story, and the general adaptation of the old building to hospital purposes, leaves very little to be desired, so far as the edifice is concerned.

By the admirable arrangement of external stairways, by the abolition of fires in the wards, and by the slate roof now covering the building, the patients are secured against the great dangers of conflagration, so often alluded to in former annual reports.

The Medical Board take pleasure in bearing testimony to the great credit due the Warden, T. Daly, Esq., for the constant interest and supervision he has evinced in carrying out the improvements authorized by the Board of Governors. The medical officers of the institution have uniformly received from him every aid in his power in the discharge of their duties.

No less cheerfully do they commend the deportment of the House Staff. Intelligent, laborious, and self sacrificing, they have performed their parts in such a manner as to deserve our warmest approbation.

An inspection of the register of attendance will show with what fidelity the attending medical and surgical officers have visited their respective services during the past year. The Board are happy to assure your honorable body that they see no necessity for an addition to their corps, as now constituted; the present staff of physicians and surgeons being entirely adequate to all the wants of the Hospital.

As at present arranged, the Hospital is admirably adapted to carrying out the system of clinical instruction so intelligently sanctioned and provided for by the Board of Governors. No medical resort of students has ever been so numerously attended in this city as Bellevue has been during the past twelve months. One consequence of the high estimation in which its advantages are held is already made evident by the number of students attracted to New York by the facilities our institution affords for the acquirement of clinical knowledge. Not only is the fame of our Hospital thus increased, year by year, but some remuneration is made to the tax payers who contribute to its support, by the amount of money disbursed in our city by those attracted to it in quest of professional information.

Appended is a table setting forth the causes of death in the fatal cases which have occurred during the year 1857.

JOHN W. FRANCIS, M.D., President.

STEPHEN SMITH, M.D., Secretary.

BELLEVUE HOSPITAL.

WARDEN'S REPORT.

New York, January, 1858.

Gentlemen: The undersigned respectfully presents

ountilement. The directisigned respectivity pr	COCTIO
his report for 1857.	
The number of patients in the Hospital on the 1st	
of January, 1857, was	602
The number of admissions (including 353 births),	
during the year was	7,074
Number treated for the year 1857, was	7,676
Number discharged for the year,	
Number of deaths for the year, 667	
	6,833
Present number remaining in Hospital	843
Herewith is presented a table showing the m	onth's

Herewith is presented a table showing the month's admissions, discharges and deaths, during the last year, also their several nativities.

Annexed is a list of articles made up by the patients during the year, and also an inventory of goods remaining in store at the close of 1857.

The thanks of the community, and of the poor especially, are due to the Board of Governors for the great and salutary

improvement made in the condition of the Hospital by the removal of the coal yard from the premises. The garden is now being filled, and extended over the place lately occupied by the coal yard, which, in addition to a hand-some circular lawn intended to be laid out, will add much to the comfort and beauty of the Institution.

I had hoped to have been able to congratulate your Board on the completion of the enlargement of the buildings at this time, but some of the work of the contractors remains still unfinished, so as to delay its being taken possession of by the officers for at least a month to come.

On the 14th September last the Matron, Mrs. Frey, was superseded by Mrs. Elizabeth R. Dennis, who has proved herself very well qualified to discharge the duties of that office.

I would remind the Board of Governors of the great necessity of having a day and night Police detailed to the streets surrounding this Hospital, and respectfully request that an application may be made for the same.

I am happy to inform the Board that the Hospital is in a good condition, and the wants of the patients well attended to by the medical gentlemen on duty, as well as by those under their immediate charge in care of the sick.

Respectfully submitted,

L....

TIMOTHY DALY, Warden.

J. FREY, A	Apothecary.

BLACKWELL'S ISLAND HOSPITALS.

RESIDENT PHYSICIAN'S OFFICE, BLACKWELL'S ISLAND, January 1, 1858.

To the GOVERNORS of the Alms House:

GENTLEMEN: I have the pleasure to submit herewith the Medical and Statistical Reports of the Island Hospital, Small Pox Hospital, Alms House, Work House, and Penitentiary for the year 1857.

ISLAND HOSPITAL.

The	total numb	er of a	dmissi	ons t	to the Island Hospital dur-
inį	g 1857 was				2,810
The	admissions	during	g 1856	were	e1,733
"	"	"	1855	"	2,158
"	u	"	1854	"	3,744
"	"	"	1853	"	3,136

The increase of admissions in 1857 as compared with 1856 was 1,077, or $62_{\frac{1}{10}}$ per cent. The total number of patients under treatment in 1857 was 3,158, against 2,083 treated in 1856.

The first of the annexed tables is a statement of the diseases treated in the Island Hospital during the year, including the Age, Education, and Nativity of each patient, as also the result of the case, and the time it was under treatment.

Following this is a comparison of the medical business for the years 1856 and 1857. In my last report I took the opportunity to submit to your Honorable Board facts proving the increase of Venereal disease, and I then gave the ratio of that malady on the gross number of patients treated as 73_{10}^{-1} per cent. In the year 1857, the ratio was 65_{10}^{-2} per cent.; but this reduction of 7_{10}^{-2} per cent. must be considered in connection with the fact, that other diseases much beyond the general average have been treated in the last year, so that a larger number of Venereal cases will yet show a smaller per centage. The cases of Phthisis Pulmonalis, (Consumption,) which have advanced from 58 in 1856 to 159 in 1857, an increase of 174 per cent., will be sufficient to explain that the decrease of Venereal affections is apparent and not real.

The series of tables marked from A to AK inclusive, present an extensive view of the transactions of the Island Hospital, during the year 1857. I submit them to your notice with much pleasure, as exhibiting in almost every possible phase, and with many important combinations, the statistics of the poverty, sickness, and degradation, it is your privilege to ameliorate. Nor do I think any apology for their extent necessary beyond the fact, that every iota of reliable information obtained on such matters must eventually become serviceable to the community at large. I will beg your attention to some few of the facts developed by these statistics.

Table B.	Of the	patients	admitted	during	1857	there
were						

Male Court prisoners (treat	ed in	Penitentiary pro	per).	.273
Female " " (treat	ed in	Island Hospital)		10
" Police prisoner	"	"		1
Total from Penitent	iary			284
Vagrants (or self-committed	patier	nts) from Work H	ouse.	2316
Patients from Alms House.	• • • • •	· · · · · · · · · · · · · · · · · · ·		210
${f Total}\ldots\ldots$				 2810

By this it will appear that $9\frac{7}{16}$ per cent only of the number treated were Court prisoners who were treated in the Penitentiary Hospital proper; the remaining $90\frac{3}{16}$ per cent. having received medical assistance in the Island Hospital. The female Court prisoners and one Police prisoner, who were admitted to the Island Hospital, will prove the altogether insignificant fraction of four tenths of one per cent. of the admissions.

The action of your Honorable Board, at a meeting held December 15, 1857, separating this institution from the Penitentiary, and substituting the name "ISLAND HOSPITAL" for the former designation of "Penitentiary Hospital," is thus proved to be, by the experience of 1857, a judicious act, that year's statistics supporting the facts submitted in my reports for 1854, 1855, and 1856. If this first reformatory movement in the government of the hospital, relieving it of the incubus which has hitherto crushed it down, be fol-

lowed by an entire and absolute separation, in every particular, of this institution from the criminal department, then will the Hospital commence a new life; then will it become a blessing to many sick and unfortunate in this city, who have until now been deprived of its advantages; and an honor and credit to you who have made and perfected one of the best and most benevolent changes ever made under your long administration of Alms House affairs.

Table C shows the number of admissions, deaths, and discharges for each month during the year 1857. The average monthly admissions for the year were 234. This proportion was not reached in any month until October; but since that time the paralysis of trade in the city has produced the natural effects on charitable institutions, as evidenced by the rapid increase of inmates.

Table D gives the number of days each class of patients was under treatment, and may be analyzed as follows:

Court prisoners in Penitentiary ... 4 16 per cent.

" " Island Hospital ... 14 "

Police " " " " ... 16 "

Vagrants from Workhouse 86 "

Patients from Alms House 8 14 "

100

This shows that of 95_{75} per cent. of the total number of days devoted to patients within the Island Hospital, but four tenths of one per cent. were given to Court prisoners, the

remaining 95 per cent. devolving upon the poor unfortunates from the Work House or Alms House.

Table E gives the birth places of patients admitted in 1857. There were

100

The nativities of patients admitted during the last four years have been as follows:

	1854.	1855.	1856.	1857.		
Natives F'reigners	$23_{\frac{7}{10}}$ pr. ct. $76_{\frac{3}{10}}$ "	$\frac{29\frac{1}{10}}{70\frac{9}{10}}$ pr. ct.	29 % pr. ct.	$\begin{array}{c c} 28\frac{2}{10} \text{ pr. ct.} \\ 71\frac{8}{10} & \text{``} \end{array}$		
	100	100	100	100		

The mean of these yearly rates will be

100

and the proportion of natives admitted in 1857, although less than in 1856, is still in excess of the average.

The proportion of natives of the several States is:

 New York
 $69\frac{7}{10}$ per cent.

 New Jersey

51	"	ar	ıd ı	ıpwar	ds.	. .	 		6^{1}_{10}	и
				_						
								1	00	

The proportion under thirty years of age is $73\frac{7}{10}$ per cent. The United States census (1850) returns $31\frac{7}{10}$ per cent. of the inhabitants of New York as between fifteen and thirty years old, but the inmates of the Island Hospital of those ages far exceed that ratio. The following gives the proportions for each of the years during which I have presented statistical reports:

In 1854 there were under 30 years of age.. $70\frac{3}{16}$ per cent.

1000					• •	1410		
18 56	"	"	"	"		$80_{\frac{4}{10}}$	"	
1857	"	"	44	44		$73\frac{7}{10}$	"	
The averag	ge for	four y	ears is		:	$74\frac{7}{10}$	44	

The proportion of inhabitants between 15

and 30 years is..... 31_{10}

Excess in inmates of Island Hospital..... $43\frac{e}{16}$ "that is, about 140 per cent. more of young people are received and treated here (if the census be correct) than would be the case if only the established proportions of ages were admitted: a fact which leaves no doubt of the extent of juvenile profligacy, and at the same time furnishes the strongest possible argument for reformatory movements.

Table H shows the degree of education of each patient admitted during 1857.

Can	read	and	write	well	$7_{\frac{3}{1}\bar{6}}$	per cent.
"	"		"	imperfectly	$31_{\frac{8}{10}}$	14.
:4	"	only			$33_{7\bar{0}}^3$	"
Une	ducat	æd			27	"
Una	scerta	ained	• • • • •	• • • • • • • • • • • • • • • • • • • •	T 6	"
]	.00

Table K shows the civil condition of patients:

Single		57 7 5	per cent.
Married		194	44
Widowed		22^{1}_{16}	66
Unascertained		1 6 1 6	"
•	_		
	1	00	

100

Table L is a continuation of the subject, showing the age of each patient in conjunction with the civil condition. In order to explain it, I will analyze the ages of the 545 married patients: thus,

16	rear	ai	ıd u	ndei	٢.,	 	 		2,2 1	er cent.
17	**	to	20	yeaı	∾	 	 		$20\frac{4}{16}$	"
21	• 4	••	25	••		 	 .		21 7	"
26	••	••	30	••		 	 		$19\frac{3}{10}$	4.
31	44	44	40	••		 	 . 		185	"
41	"	"	5 0	••		 	 		125	**
51	• 6	an	d ս լ	wai	rds	 	 		5_{16}^{3}	"
								_		
								1	00	

The per centages of widowed patients are

17	rears	to	20	year	3 .	 	 ٠.	 6^{14}	per cent.
21	**	••	25	••	•	 	 	 20^{-1}_{14}	46
26	••	••	30	••		 	 	 20^{-4}_{15}	
31	**	**	40	**			 	 17,4	
41	**	**	50	••		 	 	 16,3	••
51	44	au	d u	ipwar	ds.	 	 	 $19_{7} $	**

This table can also be viewed in another form, giving the civil condition of all patients of any specified age. I have already alluded to the numbers under thirty years of age, and the following is the ratio thereof:

Single	687 F	er cent.
Married	$16\frac{6}{10}$	"
Widowed	14	"
Unascertained	Y 0	"
1	100	

Table M gives the social habits of patients admitted during 1857. The ratios are

Temperate	$15 \frac{6}{10}$	per cent.
Moderate Drinkers	22_{70}^{7}	"
Intemperate	39_{10}	"
Habitual Drunkards	$21_{\frac{6}{10}}$	"
Unascertained	T 0	"
·	100	

Comparing this with the corresponding statement for 1856, it will be seen that the admissions of patients with

Temperate habits have increased .. $\frac{7}{16}$ per cent. Moderate Drinkers " .. $8\frac{16}{16}$ " Habitual Drunkards " .. $1\frac{6}{16}$ " Unascertained " .. $\frac{2}{10}$ " $\frac{2}{10}$ "

and the admissions of intemperate patients have decreased the same amount, namely, $11_{\frac{3}{10}}$ per cent.

Table N gives the social habits in conjunction with the ages of patients admitted during 1857. In the following table of per centages, the habits stand at the heads of the columns, and the ages are on the left hand, the point at which the two intersect giving the required information. For example, if it is wished to ascertain the proportion of patients of intemperate habits, who were from twenty-one to twenty-tive years old, the third line in the middle column shows 28_{177} per cent, as the total number of intemperates. With this explanation there will be no difficulty in readily discovering the various combinations, which, it is submitted, are worthy an attentive consideration.

5146

And the ratio of mortality will be 1_{10}^{7} per cent., against 1_{10}^{7} per cent. in 1856; a result which can but be satisfactory to your Honorable Board.

Table Y gives the list of deaths, with the hour of the day or night at which decease occurred.

Table Z is a condensed statement of the current expenses of the Island Hospital for the year 1857, including every item of outlay excepting the repairs of the building, which I have no means of giving; but as this can only amount to a small sum, nothing of any consequence having been done during the year, it will scarcely affect the proportions. The line at the foot of the table shows a reduction of \$2 93\frac{1}{2}\$ on the expenses of each patient treated, or $5\frac{88}{1000}$ cents per week for every inmate, making a total saving of \$1,235 52, notwithstanding the advanced cost of provisions during the first half of the year.

As until very recently this Hospital has been connected with the Penitentiary, I have, in the next table, followed the plan of affixing a value upon the labor of the inmates, after the manner adopted in the report from the Penitentiary for the year 1856. Our result shows that the institution cost only \$3,754 11 (!) during the year. This is the first time the system has been in operation, and of

course difficulties were to be encountered; but it is believed that with our present experience, 1858 will show a clear balance sheet, and a large surplus to the credit of the Island Hospital.

SMALL POX HOSPITAL.

The destruction (by fire) of the old Small Pox Hospital rendered it necessary to transfer the patients to the new building on the 3d of January, 1857. This was some time sooner than was intended, and has had the effect of increasing the current expenses of the year, as many necessary articles were not supplied to the new building before it was occupied, and others which had been in use were burned, and when subsequently asked for on requisitions were charged in the monthly distribution lists, instead of making a debit upon the building and furnishing accounts. I make this remark now because the table of expenses (marked F) shows a larger pro rata cost than before, and one which will be materially reduced in the year 1858. In this connection I will remark that the outlay has been increased by the engagement of paid nurses, but such a course has been, in the highest degree, valuable, judging from the reduced ratio of mortality.

At the close of the first year's occupancy of this building, it gives me satisfaction to congratulate your Honorable Board upon its admirable arrangements, and its availability for the purposes to which it was designed. It is a valuable building for hospital purposes.

The series of tables from A to F give the history of the medical business for the year 1857. You will observe from table A that the number of inmates has increased $44\frac{1}{2}$ per cent. in 1857 as compared with 1856, and table C shows the gratifying fact of a mortality of only 12 per cent. against $18\frac{9}{10}$ per cent., which has been the average for the last four years, or against $23\frac{2}{10}$ per cent., which was the mortality in the year 1853. On the question of mortality I would also ask your attention to table E, which shows that fifteen (or nearly one half) of the thirty-three persons who died were under treatment less than six days.

ALMS HOUSES.

The medical business at the Alms Houses presents little variation from previous years. A very large amount of sickness has been treated, with a mortality amounting to $4\frac{5}{10}$ per cent. The Summary (marked B) which precedes the mortality table will show you that 49, or 15,4 per cent. of these who died, were received in the Alms Houses direct from Bellevue Hospital. A large proportion of those coming from New York were, the day preceding their admission here, discharged from the City Hospitals proper, principally from Bellevue. In my report for 1854, I said, in allusion to this matter: "I can see no reason for making the Alms House a 'Dead House' for other institutions, nor can I conceive myself that it is merciful to transfer persons, in or near a dying condition, from one institution to another." Subsequent observations have not induced me to change this opinion. The system bears

unduly upon the Alms House, making that department responsible for the deaths of persons who have been treated elsewhere.

The overcrowded condition of the buildings before noticed, in my Annual Reports for 1854, 1855, and 1856, has been much aggravated in the past year, owing to the general depression of trade and wide spread poverty existing in New York. I cannot conceal my opinion that much, at least of the infantile sickness may be assigned to this cause. I beg leave to refer you to my former reports concerning the crowded, badly ventilated condition of the Alms House buildings. I cannot add force to my former statements.

WORK HOUSE.

The statement shows the amount of sickness treated in this building. The ratio of mortality $(1\frac{s}{16}$ per cent.) speaks very favorably for the health of the institution.

I embrace this opportunity to acknowledge the courtesy with which the Warden of the Alms House and the Superintendent of the Work House have received my suggestions respecting the health of the persons under their respective charge, and the promptitude with which such suggestions have been acted upon by those gentlemen.

METEOROLOGY.

The Observatory has been carefully attended to throughout the year. I have the honor to submit monthly tables of the various facts noted.

The transactions of the year just closed cannot be viewed in any but a favorable light. With crowded institutions there is still but a very small mortality; no epidemic or serious disease has visited us; but on the contrary the beneficial effects of good ventilation, sufficiency of water, and the general improvements made in the last four years in the arrangements and conveniences of your Hospital buildings have strikingly shown their importance and value.

To the medical gentlemen who have been on my staff during the past year, Drs. Packard, Woodhull, Leavitt, Selden, Frost, Goss, Brush, Greenlee, O'Neil, Van Wagner, Cooper, Cox, Gallagher, Ware, and Neff, I am under obligations for the manner in which they have carried out my wishes, and for their uniform attention and kindness to the patients under my charge.

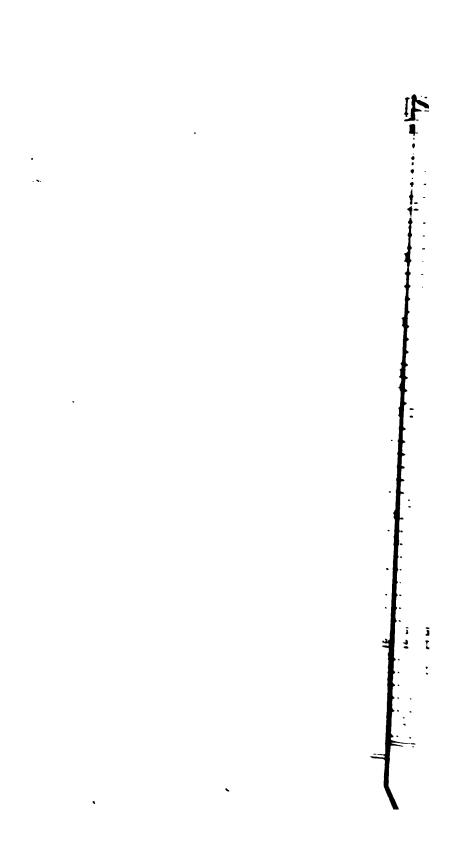

The Apothecary, Mr. John Atkinson, also merits my commendations for the assiduity and care he has evinced in the task of dispensing the medicines consumed on the Island.

I again bear testimony to the value of the services rendered by the Steward, Mr. B. B. Sibell; in this, as in former years, he has shown himself every way adapted for the position he holds.

Mr. S. G. Butler, the Clerk of the Hospital, has performed his arduous duties in a most satisfactory manner. He is a valuable officer, and deserves to be remembered by your Honorable Board.

ISLAND HOSPITAL METEOROLOGICAL REGISTER,

FOR THE YEAR 1857.

Note.—The figures in the annexed Tables, showing the amount of cloudiness, are based upon the following scale:

0 implies a perfectly clear sky.

10 " a sky entirely covered with clouds; the intermediate figures forming fractional numerators of 10, and representing a corresponding amount of cloudiness.

The figures indicating the force of wind are-

1. Very light breeze; velocity about two miles an hour.

2.	Gentle		"	"	**	four "	••
3.	Fresh		"	**	u	twelve	44
4.	Strong	wind		44	"	twenty-five	4
5.	High	"		44	"	thirty-five	"
6.	Gale	"		44	44	forty-five	44

NEW CITY CEMETERY, WARD'S ISLAND.

To the GOVERNORS of the Alms House.

GENTLEMEN:

The undersigned respectfully reports that, agreeably to a resolution of your Honorable Board, he assumed the duties of Superintendent of the New City Cemetery and Farmer on the 1st of January, 1857, and that he now submits his annual report of the interments in the Cemetery during the year, and also a report of the admissions and discharges from the Farm House.

Admitted during the year, as per table annexed:

	60	Men,	8	Women,	3	Children.
${\bf Discharged}\dots\dots\dots$	4 ŏ	do.	5	do.	0	do.
	—		_

of the Cemetery, containing twenty acres, which was a forest of cedars, with many rocks of large size, has been cleared and the cedars removed. We are now employed in digging out the bowlders and blasting the large ones. I would further remark that we have in the barn ten tons of hay in good order for the department that may require it; and also fifteen hundred of cedar bean-poles trimmed and pointed, with two thousand more we are preparing in the same manner.

I wish to call the attention of your Honorable Board to the importance of having an office built attached to the Cemetery, with a small safe therein, for the protection of the books and papers.

A statement of the total weekly interments in Cemetery during the year is annexed, marked A.

All of which is respectfully submitted,

WM. O. WEBB, Superintendent.

CITY PRISON.

Office of the Physician of the City Prison, (Halls of Justice,)

NEW YORK. January 1, 1858.

To the GOVERNORS of the Alms House.

GENTLEMEN:

The period has again arrived at which it becomes my duty to lay before you the Statistics and Sanitary Condition of the Prison under my charge.

It gives me great pleasure to say that, during the past year, we have been exempt from all pestilential and contagious diseases.

The health of the inmates has been, all circumstances considered, as in former years, remarkably good; yet there is a constant daily and nightly call for my professional services, both medical and surgical, in a greater or less degree. By assiduity, however, and the entire devotion of my time to my duties, I have been enabled to perform them in a manner, I trust, perfectly satisfactory to both officers and patients, and to the committee of your honorable body specially entrusted with the supervision of the prisons.

Several cases of small pox, occurring outside, have, indeed, passed through the institution, but their prompt removal and the subsequent adoption of energetic measures of purification have, happily, prevented its spread.

The total number of commitments to the four prisons—City Prison, proper, 1st District; Jefferson Market, 2d District; Essex Market, 3d District; Yorkville, 4th District—for the past year, 1857, have been 27,845.

The following tabular statement exhibits the total number of deaths occurring in the City Prison, proper, during the past year, and the diseases by which they were induced.

CAUSES.

Congestion of the Brain	18
Debility, Old Age, and Exhaustion	
Delirium Tremens	3
Meningitis	2
Congestion of Lungs	2
Croup	1
Poisoning, by laudanum	1
Executed	1
Total number	33

There have occurred in the Prison, during the past year, several births at the full time, and several premature con-

finements. The patients have been generally lodgers, sent here for temporary shelter by the Superintendent of Outdoor Poor, or brought in by police officers from the street.

The City Prison still continues to be the great receptacle for cases of Insanity derived from our own and other counties of the state, the neighboring states, and occurring among emigrants arriving at this port.

Every day in the year, assisted by a professional associate, I am called upon to examine at least two cases, on an average, of "Insanity," real or suspected, in individuals from every nation on the face of the globe. These persons are sent here by the authorities, by the intervention of friends in various localities of the city and counties adjacent, and by the Commissioners of Emigration. It is my duty to assign to each its proper character and destination. Many are cases of temporary insanity (delirium tremens) from intoxication, a few of which die, and most of which are discharged cured in a few days.

The general disposition made of these cases during the past year is shown by the subjoined table:

Total No. of Commitments for Insanity.

It gives me great pleasure to reflect, that, in a period of ten years' service, I am not aware of a single instance in which an improper diagnosis, on my part, has been detected, or the liberty of an individual improperly invaded.

The Main Prison has, during the past year, received additional proofs of the continued watchfulness of its supervisors, tending to the increase of its health, cleanliness, and comfort, and now leaves, as a mere place of detention, little to be desired.

I desire to congratulate your honorable body on the result of the construction of the new prison at Essex Market. In point of light, ventilation, cleanliness, and care on the part of its keeper, Mr. Orr, of which I speak confidently from observation, I deem it, for its size, a model institu-

tion. If any thing in it admits of improvement, I would suggest the widening of the bunks on which the prisoners lie. Their narrowness, admitting of repose but in one position, on the back, becomes, in sickness, a source of great personal inconvenience.

The extension of the prison at Jefferson Market has increased its capacity of accommodation and means of ventilation, and may be looked upon as a decided improvement.

The prison (lock-up) at Yorkville will, it is to be hoped, ere long, be removed from its present subterranean location; although, under the care of its present keeper, Mr. Dofy, its cleanliness, it is hoped, will insure its salubrity.

It is satisfactory to me to reflect, that, during the past year, I have not, for a single day, been absent from my post; nor, for the whole term of my service in the office of Physician to the City Prisons, have I, except for a few brief periods, when unavoidably prevented by illness from attending, neglected my duties for business or pleasure.

My best efforts shall be continued, with zeal and cheerfulness, to merit the confidence in and kindness which your honorable body has ever exhibited toward me, and for which I am sincerely grateful; and in my requisitions, so liberally granted, I shall pay an increased attention to economy.

I remain, very respectfully,
Your obedient servant,
JOHN C. COVEL, Physician.

CITY PRISON.

NEW YORK, January 1st, 1858.

To the GOVERNORS of the Alms House:

GENTLEMEN: I have the honor of submitting herewith a Statistical Report of the City Prison and its branches for the year 1857.

The aggregate number of commitments to the several prisons is but little greater than that of the year preceding and the tabular statements exhibit no material deviation, in any particular, from the similar statements of previous years.

IN THE FIRST DISTRICT PRISON

a number of improvements have been made during the past year. The old boiler, used for culinary and heating purposes, has been replaced by two new boilers that operate satisfactorily. In both the male and female departments the interior walls have been newly plastered, (by prison labor,) and those of the former department have been painted; the walls of the female department will also be painted as soon as the requisite number of painters can be obtained from among the prisoners.

THE SECOND DISTRICT PRISON

has been supplied with a furnace in the cellar, which is well adapted to its object. I would respectfully suggest to your

Honorable Body the expediency of placing an iron railing, and relaying the sidewalk, in front of this prison; the prison yard also requires paving, and the flagging now on the sidewalk will be sufficient for that purpose.

THE THIRD DISTRICT PRISON

has been completed and occupied. This building is also heated by furnaces placed in the cellar, which work well, supplying a sufficient degree of warmth through the entire building. There is but one exception to the general good order of the establishment, and that is the condition of the locks upon the cell doors: the necessity for new ones in their stead is urgent and immediate.

THE FOURTH DISTRICT PRISON

has been recently reëstablished. It can scarcely be necessary to allude to the utter unfitness and inadequacy of the premises now occupied by this department. The erection of a suitable building, at the earliest practicable period, is advocated by every consideration of prudence and humanity.

Yours respectfully,

JOHN GRAY, Warden City Prison.

REPORT.

NEW YORK, January 1st, 1858.

To the GOVERNORS of the Alms House of the City of New York.

GENTLEMEN: It again becomes my duty to lay before you the Annual Report of the Colored Home.

Although nothing especial has occurred worthy of note during the past year, yet the Institution, I think, may be said to be advancing in its career of usefulness: there is no weariness on the part of our managers in their efforts to benefit the class of persons committed to their charge, and every year I think more clearly shows the good resulting from their labors; each week finds our First Directress at her post to examine into and supply the wants of our inmates, and scarcely a day but one or more of our Reading Committee are in the different wards attending to the duties assigned them.

The average number of admissions, as will be seen from the statistics, is larger than usual; this has especially been the case since the opening of the winter, and of this number but a small proportion have been from sickness, the greater part from destitution only. Nearly all those who have been accustomed to obtain a livelihood along our wharves, and among our shipping merchants, have this season been unable to procure from these sources work enough to sustain them.

The number of those who have gone out from us to good places, I am happy to say, is still on the increase, considerably larger this year than at any former period; indeed, the Home is every year becoming more and more the resort of persons from the country seeking colored domestics. With this we are of course well pleased, inasmuch as it enables the managers to provide for those in whose reformation they have reason to feel confidence, and to place them beyond the reach of evil companions.

The number of children has likewise been large; for most of those of sufficient age, good places in the country have been procured.

The Board of Managers have been fortunate in obtaining the services, as Steward, of Mr. Allan McLean, who, from his long employ in the various departments of the Alms House, and extensive acquaintance with most of our public institutions, has been to us, in that capacity, a most valuable acquisition. They likewise feel that in their present Chaplain, the Rev. Thomas McFarlan, whose deep interest in this class of people has led him to devote a portion of his time to their moral and spiritual good, and that, too, without any charge to the Institution, they have

one filling that important office in every respect entitled to their esteem and gratitude.

To the Medical Council the thanks of the Board are due, and especially to Dr. Thebaud, for his constant attendance to the Surgical department of our Hospital.

We would again invite your Board to a frequent inspection of our Institution, and cannot but feel confident that you will feel gratified at the improvements which have been made during the past year, and for the good order and neatness that prevails throughout the Hospital Department, for much of which I am indebted to the judicious management of my esteemed assistant, Dr. J. D. Brumley.

Very Respectfully,
Your obedient servant,
JAMES D. FITCH.

REPORT.

THE Managers of the Colored Orphan Asylum, at the completion of their twenty-first year, are cheered in the belief that the Institution has steadily progressed, and that public confidence has been increasingly manifested. To those who have anxiously watched over its interests since it first struggled into existence in the autumn of 1836, amidst commercial embarrassments and exciting prejudices, which were hard to grapple with, their present position affords a striking contrast. For several successive years, though the orphans' table was well filled, a previous week's supply was scarcely known, and their only dependence was on Him whom they believed had directed their course from step to step, and to his extended bounty they feel especially bound, at the present time, to offer the tribute of praise.

But little change has taken place in the Orphans' Home for several years, and but few incidents are afforded of public interest. The same vigilant care has been extended by the managers, who still continue to have the services and coöperation of their valued superintendent and matron, who, for nine years, have controlled the details of their establishment.

Within the last year seventy-four children have been attacked with scarlet fever, four of whom only died. The disease at one time assumed a very malignant form. With this exception the Institution has been unusually healthy.

A man and woman have been employed to take care of the children out of school hours, which releases the teachers from a laborious and exposing duty. This arrangement, while it has increased the expenses of the establishment, is promotive of order, and materially affects the moral training of the children. The man is employed in the shoe shop at intervals when disengaged, and the woman, in the sewing room.

The outside of the main building and hospital, and a part of the inside of the main building, have recently been painted, which, together with necessary repairs, have required a considerable outlay.

Aaron Wood, a scrofulous child, was admitted into the Asylum Hospital in 1851, where he remained six years, suffering greatly from a succession of abscesses, &c., &c. He attended school part of the time, but when unable to do so, would occasionally take pleasure in instructing the little children around him. During his last illness he gave

evidences of a change of heart, and a confiding trust in his Saviour. He appeared desirous of conversing on subjects of eternal interest. Being asked by the superintendent what were his feelings on the approaching change, he replied that he had prayed to his Saviour to pardon his sins; he had prayed for himself and all that were in the Asylum, that they might be made happy, might be saved, and go to heaven; said that when the boys used to tease him he would retaliate, but of late he let it pass on, and took no notice of them. He requested liberty to sing with a friend, who kindly called to see him. Sing, said he, "There is a Happy Land;" and his voice held out until near the conclusion.

To the superintendent's wife, he remarked, "I love you, I love Johnny and Henry, but I love Jesus Christ better."

To the matron, whom he sent for, he said, (his sight having left him,) "I can't see anybody; I feel very bad." "How long have you felt so?" "I felt bad this morning, but I did not let Mrs. H. [the nurse] know it, lest it would trouble her, and she would not go to church." On being lifted up, he said, "Don't, it is too much trouble;" and on being laid down, "Lord, have mercy on me." "You have been praying to him to have mercy on you?" "Yes, I have been seeking the Lord ever since I promised you I would; I have prayed every day, and read my Bible every day; I offended you once, I was very sorry; I went right to the Lord to ask him to forgive me; will you read for me and pray? read where the Lord called little Samuel." This was succeeded by the 10th ch. John, "I am the good Shepherd, &c.," on which he remarked, "the children of

Christ the good Shepherd," and appeared deeply interested. "When you get rested," said he, "pray for me; pray that the Lord will make me a good boy, and prepare me for Heaven." "Do you know you are dying?" "I know I am; I can't stay here but a little while; I know I am dying," he repeated emphatically. "I have prayed for myself and for all the children; and I have prayed for you too, and for all the folks; they don't always care for what you say; I know they don't." He then sent a message to some of the managers, enumerating them who had manifested a concern for his best interest, and had urged upon him to seek the Lord. "Tell them," said he, "I have done so, and that I am gone to Heaven."

He expressed his gratitude to the matron for her kindness in sending him so many nice things. "How many comforts I have," said he, "that other poor boys have not had." Gave his Bible to his nurse. In the evening, after singing "Happy Land," he beckoned with his hand, and said, "It's all white; it is shining; it is shining." The matron asked, "Do you see an angel?" "Yes, an angel," was his reply. "Give my love to Miss K. and Miss S.; I want to see all; I love all; —— was cross to me; I forgave her; I'll pray for her." To the matron, he said, "I wish you could go with me; I know I am going; I have made my peace with God; my mother said to me when she was dying, 'You must be a good boy and meet me;' I shall go to her."

ANNA H. SHOTWELL, Secretary.

The whole number of children in the Asylum during the year was 286. The proportion of the sick was 1 in 17; of deaths 1 in 16, an increase in both sickness and mortality, over last year, and entirely due to scarlet fever.

The immunity from epidemics enjoyed in 1856, was followed by both measles and scarlet fever during the current year.

The measles occurred within ten days from date of last report, lasted about thirty days, and was followed by only one case of phthisis.

On the 14th February the first case of scarlet fever occurred, and on the 14th March this epidemic had ceased entirely. Immediately on the occurrence of this disease, all the children were put on small doses of belladonna, (a solution of the extract,) yet one third of the whole number were attacked with the disease, 74 out of 225. There was

but one case with throat symptoms, and the dropsy, which usually occurs after the disease, happened to only seven. These modifications of the disorder may have been the result of the use of the belladonna.

Two well marked cases of erysipelas occurred in two of the convalescents, a disease which has doubtless been mistaken for a second attack of scarlatina when thus occurring.

Only one of the cases of measles in December also took scarlet fever, sixty days afterwards.

The scarlatina seemed in many instances to seek families of children, brothers and sisters. In one family of six all were attacked, and the largest share of the mortality also occurred in this family, a fact which suggests the probable influence of parentage on the susceptibility to this dreadful malady.

The only case of malignant sore throat from scarlet fever, Georgiana Monet, in delirium found and drank the solution of belladonna, intended for all. Violent symptoms of poisoning supplanted the violent symptoms of the Angina, and she barely escaped with life, under enormous doses of brandy and ammonia. I am impressed with the belief that she saved her life by poisoning herself.

The last epidemic of scarlet fever occurred in this asylum in 1850, when the general administration of belladonna ap-

peared to arrest the epidemic on the second day of its use, only 17 cases having occurred in all.

Since March last, the children have enjoyed unusually good health, the only cases of illness having been chronic, or long standing incurables.

Which is respectfully submitted,

JAMES McCUNE SMITH, M.D.

15 NORTH MOORE STREET, NEW YORK, December 9, 1857.

FERRY, BLACKWELL'S ISLAND.

FERRY DEPARTMENT, B. I.,

January 1, 1858.

To the Honorable the BOARD OF GOVERNORS of the Alms House:

GENTLEMEN: In compliance with your instruction, we here hand you the annual report of this Department for the year 1857.

The Blackwell's Island Ferry has now been in operation thirteen months, and we believe it has given general satisfaction, although at the commencement of the present ferry arrangements we labored under many disadvantages. It was in the winter, one of the severest winters that we ever experienced, the river was full of floating ice, and we then lacked the experience that we now have in conducting the ferry. Chapman's shop was in full operation, and from sixty to eighty persons from the city were employed there. To accommodate them, and the officers and mechanics belonging to the several Institutions, was no easy matter; however, we did all we could to accommodate.

During the winter one of our boats was crushed by the ice, while conveying prisoners to the Island. At times our

boats were carried by large fields of ice up or down the river, while the coxswains and crew were using their every endeavor to extricate them. One of the ferry boats, after being blockaded by the ice for hours, succeeded in landing at Eighty-sixth Street after 9 o'clock P. M.; and there being no chance for them to get back to the Island, the coxswain and crew went to the station house and remained there during the night.

Two coxswains, Mr. McLane and Mr. Wright, resigned their situations, they not feeling able to perform such arduous duty, or stand the severe weather to which they were necessarily exposed, and consequently green hands took their places, which added not a little to our embarrassments. Yet notwithstanding all of the aforementioned disadvantages, we managed to get along without any serious accidents.

Our boats commence running at half past five A. M. from the Island, making their first trip from Sixty-first Street at 6 o'clock, running as often as necessary to bring to the Island the officers and mechanics belonging to the several departments in time to commence their day's work up to 8 o'clock, after which time our regular half hour trips commence, and continue up to 12 o'clock M., when our boatmen get their dinner. At 1 o'clock we resume the half hour trips, and run regularly until the officers and mechanics leave off their day's work. We then make it a point to have boats in readiness to convey them across to Sixty-first Street without any delay. Our last trip from the Island is half

past 7 o'clock, and the last boat from Sixty-first Street is 8 o'clock P. M. Seldom or never is there any one to go from or come to the Island after 7 o'clock P. M. in the winter season, and as it would be a great saving in fuel and lights, we would recommend that during the winter season the last boat leave Sixty-first Street at 7 o'clock.

Your Honors will please recollect that you gave the Wardens and Heads of Departments the privilege of selecting such boats for the use of their departments as they desired, and consequently the boats left for the use of the ferry were such as they rejected. They needed repairing and painting before they could be considered safe, or even present a respectable appearance. One of the boats was seven years old; she had been smashed by the "King Philip" at Randall's Island; and although she had undergone considerable repairs, she was far from being a strong boat, and under a heavy burden or in rough weather she exposed her weakness. This same boat was crushed by the ice last winter. Taking the above facts into consideration. and believing that it requires a stronger boat than she is to successfully contend with the ice this winter, we sent a communication to your Honorable Body setting forth the need of a new boat, and we would now recommend that a new boat be built for the ferry department, of such materials and dimensions as will secure durability and capacity.

One of the objects your Honors had in establishing the present ferry was to prevent thieving; and in order to do

that, you gave us the power to examine all packages and parcels brought to or taken from the Island, as well as the persons of suspicious characters; and we have been successful in preventing public property being taken from the Island. In all cases the property taken from persons, has been returned by us to the institution that it belonged. When "Chapman's shop" was in operation, we found on the persons of discharged inmates who had been working there, large quantities of such articles as they manufactured, all of which we returned to Mr. Chapman.

We have taken from inmates who were out on pass, and from visitors, a great many bottles of rum, which we destroyed, and we are pleased to say that we have almost entirely put a stop to its being brought to this Island.

We would respectfully call your attention to the condition of the slip at the ferry house. At low water our boats are not able to land at the steps, and it is with great difficulty that we take in or land passengers. There should be an excavation in the slip of from twelve to eighteen inches, and we believe it could be accomplished at a trifling expense with the use of a scow. A scow suitable could be built by inmates; at low water the scow could be loaded, and as the tide rose she could be hauled into deep water, where the mud would not wash back into the slip, and unloaded. Thus in a short time the much needed excavation could be accomplished.

V. WILL HE THERE IN A PROPERTY DATE OF THE PROPERTY OF THE PRO

consens years for a success of all or notes received in the real state of the control of the control of the annual control of the properties. The same a accompanied by an inventory of all property amanet in the Sharkwell's Island Form Lectures.

all if when a respectfully submitted

CEARLES F. GRAHAM.

REPORT.

To the Honorable the BOARD OF GOVERNORS of the Alms House.

Gentlemen: I respectfully submit to your Honorable Board my Eleventh Annual Report, including the statistics of 1857. On the 1st of January there were 597 patients, which with the admissions gives 928 as the whole number under treatment. There were on the 31st of December 627, an increase of 30 patients during the year. 826 were admitted and 296 discharged; of which 152 recovered, 51 improved, 18 were unimproved and 75 died. The percentage of recoveries on the admissions is 47, and that of deaths 8 on the whole number. The principal facts usually given will be found by reference to the statistics.

As the subject of insanity has agitated the public mind to a considerable extent the past year, I deem it proper to give a concise outline and routine of asylum life; the popular idea of the seclusion, restraint, and treatment of lunatics being sadly erroneous. This error has arisen mainly from real occurrences in the dark ages; from false narrations of those who have been under asylum treatment without benefit; or from fanciful descriptions, the product of a vivid and distorted imagination. By depicting the

darkest side of humanity, and portraying in glowing colors the most sordid and sensual of passions, the most terrible and unprecedented cruelties, certain misanthropic feelings are gratified. My object is to convey a clear and truthful representation of its workings, that if prejudice or bias exist, it may be removed; that on the one hand it may not be considered a place formed of secret traps, dark dungeons, and iron chains; nor on the other a palace filled with genii all-powerful in removing sorrow, where are constantly found quietude and happiness.

A lunatic asylum is a little world of itself, excluded to a considerable degree from the great world without. Those of this country, I apprehend, differ but little in their management and course of treatment; the main characteristics of each depending upon the natural advantages of locality, the class of patients received, the more or less liberal supply of luxuries in the way of diet, and the various appendages of the apartments.

It is therefore necessary for a correct appreciation of this Institution, to have a general idea of our society. This is made up of natives of almost every known land. The psychical national peculiarities are brought in close proximity, making each more prominent thereby. The phlegmatic, gay, morose, volatile, and the astute, meet on common ground, and their education and natural abilities have a compass as extensive as their language, ranging from genius to utter imbecility. A classification, however, is adopted to disassociate incompatible tempers and dispositions, yet a

mingling of the less marked of these elements produces apparently a happy effect. A cognizance of the mental condition of others without a recognition of their own aberrations, draws forth a patronal sympathy, a fellow-feeling which would establish a quasi democracy, were there not peculiar opposing delusions. The "Presidentess." "Queen of America," and "Daughter of the Russian Czar," will not consent to be classed with each other, or with those of more plebeian birth; thus forming as many distinct castes as are found among the believers in the Brahma; and the principal link that binds the various aristocratic and democratic elements consists in the disposition to patronize: a proper and legitimate field for the exhibition of this propensity. The peace and harmony of the household require a proper deference to, and a fair consideration of their several rights. Of such incongruous characters and tastes is composed the family of the asylum.

With this brief notice of their leading characteristics collectively, I proceed to give the general routine pursued in each individual case, for the purpose of showing more clearly, the mode and result of hospital treatment.

On the reception of a patient, he is carefully examined, the previous history obtained of his friends, and from these facts a decision formed, as to the class with which he can be properly placed. Usually, a warm bath is given at once, and should there be no particular indication for the administration of medicine, a few days elapse before any regular course is adopted, that the particular condition may

be more carefully observed. A salutary influence is immediately commenced by the establishment of regular habits. He rises in the morning, takes his meals and retires at certain definite, fixed hours, and if practicable, is required to make his own toilet and keep his room in order, which regimenal course of regularity acts favorably not only on the physical system, but on the mental powers. When the observation has been continued sufficiently long to warrant the procedure, he is allowed to pass most of the day in the open air, in the company of other patients and an attendant. As soon as deemed safe, he is employed in out-door labor; the culture of the vegetable and flower gardens, grading the grounds, and filling in the marsh land, affording this means of employment; while many assist in domestic matters in the kitchen, cook-house, laundry and wash rooms. Some go daily to the sewing and knitting rooms; others prefer to work in the halls. Occupation not only tends to the removal of mental disease, but renders recovery more permanent and complete.

Amusements, occasionally introduced, serve to vary the current of thought even of those who cannot be induced to labor; the most valuable being such as afford pleasure to the greatest number, and in which many can take a part.

Perhaps music and the dance afford the highest degree of gratification, without painfully lessening the proper self love, and it is surprising with what cheerfulness the highborn dame will consent to take a partner from the plebeian ranks. The evening entertainments are, usually, compound in their character, uniting the ball and concert; and among our large number are found musicians who play on almost every variety of instrument, of which the piano, violin, guitar and flute are in very frequent use. Several months since, a new orchestra was formed, which, from its unique character, meets with the general approval of the inmates, the instruments being a violin, banjo, triangle, tambourine, and castanets. The dancing is quite as varied as that of a ballet company, although perhaps not strictly conformable to the rules of an artiste; in fact, conventional forms are not received with any great favor. The cotillion and waltz are rather tolerated than enjoyed by the masses, and are practised only by the conservative few. The strictest. propriety of conduct is ever observed by all who are allowed to participate in these amusements. The celebration of holidays constitutes an attractive feature, by engaging the minds of the patients for several days in preparing costumes and in decorating the building, as well as through the recreative change in its participation. New Year's, Washington's birth-day, Anniversary of the Ten Governors, Fourth of July, Thanksgiving and Christmas are each duly regarded.

To present a general idea of the entertainments, the Christmas programme is given.

Part IJ.

PANTOMIME.

THE FAIRIES CAPTIVE.

SCENE I.

A forest at dim twilight—A poor old man almost exhausted with fatigue is seen in the background leading a little girl, his granddaughter. They seem to have lost their way—The little girl, unable to go farther, lies down on the ground and the old man, having consigned her to the protection of Heaven, sadly leaves her to seek their lost way.

SCHOOL II.

The little girl, asleep and alone in the forest, dreams of her "Home, sweet home."

SCENE III.

Two woodland fairies enter cautiously, as though fearful of being discovered in their forest haunts—They see the little girl asleep; astonished and delighted, they glide stealthily around her, then retire and bring with them other fairies, when they all mysteriously encirele the little sleeper.

SCENE IV.

The fairies move gently about the little girl, who, under the influence of their magic charms, becomes a fairy like themselves.

SCHNE V.

No longer afraid, they dance gayly around the sleeper, who gradually awakens, and half pleased, half fearing, rises to her feet.

SCENE VI.

Other fairles enter and begin to dance—The little girl, now a fairy, soon joins them, and finally they all dance wildly about, until, alarmed by a noise in the distance, they suddenly disappear.

SCENE VII.

The old man returns for his granddaughter—Finding her garments still remaining, but the little girl gone, he stands gazing at them for a time in mute astonishment and grief, and finally sinks down, overpowered with anguish—Meantime, the fairles are seen stealthily approaching with the little girl, their captive—They glide slowly and noiselessly about the old man, and all hover around him, as if to cast a spell of forgetfulness over all his sorrows.—Tableau.

GRAND FINALE.

FAIRY DANCE.

The library and museum aid in diverting the attention from insane fancies, and afford subjects for the healthy occupation of the mind. Chess, backgammon and draughts are resorted to by the few, but are regarded with little favor from being thus limited.

To one unacquainted practically with the resulting effects, it may seem trivial to attach such importance to matters so trifling; but upon the varied and judicious repetition of these depends much of the happiness and even success of treatment. And is it not true that the sum of temporal pleasures and joys of life is made up to a great extent of trifles?

Let any one attempt to analyze and trace the causes of present agreeable sensations, and does he not find them trifling, fleeting and evanescent? Viva la bagatelle!

But in describing lunatic life, it must still be remembered that a darker side exists, hitherto unnoticed. There are

also patients in whom the intellect has become so impaired that loss of memory, reason, and comprehension, sinks them in the scale of intelligence beneath the brute creation.

Constant care must ever be bestowed, they being in every respect dependent; and unsuggested, not a movement would be made from day to day.

"No pleasing memory left—forgotten quite All former scenes of dear delight, Connubial love, parental joy, No sympathies like these the soul employ, But all is dark within."

Others, with feelings dead apparently to all objectivity, can never be induced to join in merry making: their days are spent in brooding over dark and melancholy thoughts, no ray of hope lights up the night of their existence. Some, ever occupied in devising means to commit suicide or homicide, cannot for a moment be safely trusted with anything to carry into execution their designs. A few complain incessantly of the inhumanity of friends "accessory to their incarceration," and suggest inducements for a mutual compact between them and the physician not particularly flattering to the honesty and integrity of either party. The violent maniac causes much trouble and anxiety, but as an offset, there is always hope eventually of recovery.

The government of an asylum should be conducted on the most humane grounds, but with the greatest care abuses will sometimes occur, to prevent which would require supernatural wisdom and goodness on the part of all, from the highest to the lowest, connected with its management. Those having the immediate charge of patients, may become irritated from their conduct, and in return unnecessarily annoy them; or the conversation may be ill chosen to soothe their excitement. One may be all attentive to his duties, but perhaps somewhat irascible; while another is unimpassioned as a stoic, yet without the least energy or spontaneity. These imperfections must be taken into consideration, they being ever existent, as perfection on the part of man cannot reasonably be expected. All that can be done is to exclude, as far as possible, the bad, and retain the good elements of character.

Our rule is, never to punish a patient. If one be violent, or noisy, he is shut in a room, with a distinct understanding that others shall not be annoyed, and soon, if promises be given of better conduct, is again allowed the liberty of the hall; which course is repeated as occasion may require. During the past year, with an average of 618 patients, not more than four daily have been confined in their rooms. Applying the term cell to our rooms is as great a misnomer, as would be the same to a Fifth Avenue parlor, they being ordinary rooms, and of the same form, size and construction throughout the entire building.

There are certain inducements held out to the insane, to which it may be proper to refer; the number being small who are unable in some degree to exercise self-control over their ordinary acts. A patient is told that if his conduct be good, he will have associates of like character, and certain privileges not otherwise allowed; besides giving great weight in his favor in the final decision of his condition of mind. The following illustrates this principle.

Some months since, a young man was admitted who for weeks had disturbed by night his neighborhood with loud prayers. He frankly confessed the truth, and stated that the same course would be pursued, as he had committed a sin of great enormity. Secret prayer was suggested, but the proposition declined. He was then informed that there were two classes of inmates; the one, quiet; the other, noisy; and should he persist in his resolution, he would be placed among the last named, that the sick and quiet might be undisturbed. On deliberate reflection he concluded to make the trial, and for one night to remain with the quiet. The following formal compact was finally adopted.

1st. That he should not disturb the house for one night, and that one day's notice of a change of intention should be given the physician.

2nd. That the physician accord to him the privilege of remaining in the best part of the house, until the notice be received; and also permission to make daily a short exhortation.

The result was that no notice was ever given on his part; he became quiet at night, the daily exhortation continued a few weeks, then was wholly omitted; and he is now perfectly well.

Our apparatus for restraint consists of the camisole, muff, common restraining strap, and bed strap. Of these, the first two are most frequently used, principally to prevent females from removing their clothing, the restraining strap most rarely, that the patient may be unable to injure himself or others; while to obtain the quietude necessary for sleep, the bed strap forms the only mode of constraint. This embraces all and every means of restraint; and the daily average of any application of this kind does not exceed one, among two hundred inmates.

My design in the foregoing description has been to lessen that mystery which mantles an asylum, by faithfully delineating its character and appliances. The painter, poet and novelist have each lent their aid in surrounding this subject with a mystic web, rendering the whole to the uninitiated dark and obscure. During the last half century, almost an entire radical change in the care and treatment of the insane has been effected; yet in detail, much remains to be done. In every asylum there is a great deal to commend; something to deplore. Time, however, will diminish the defects, remove all prejudices and superstitions, and insanity will be considered in its true light; simply a disease of the brain.

A discourance wise that comments as a very some an interpretation of the party of t

IMPROVEMENTS DURING THE YEAR.

The cook and wash house, now complete and perfect in its arrangements, is in striking contrast with the previous ill constructed rooms and appliances for that purpose. It is a stone building, one story in height, in which are three large boilers of size sufficient to generate steam necessary for cooking and washing, for heating the asylum, and also all the water used in the halls. The heating pipes of the asylum are guarded by an iron screen-work, so that no danger need be apprehended of patients coming in contact with them, and no fire is now kept in the building except in a private kitchen. The stoves, grates and furnaces have been also removed from the lodge, and a boiler placed in the rear basement, with pipes leading through every part of the building, and so connected that either hot water or steam may be used in warming the house. Among the advantages arising from this change are diminution of risk from fire, the carrying of wood and coal through the halls abolished, as also the necessary troubles connected therewith, the obtaining equable and sufficient warmth in all the rooms, and probably a saving of fuel. The buildings heretofore in winter had never been properly warmed. whole heating apparatus and fixtures was furnished and put in operation by the firm of James O. Morse & Co., of this city, and thus far gives entire satisfaction.

A large work-shop connected with the work house has been fitted up for the reception of the insane, and will be

occupied early in the coming year. It is intended to accommodate about 150 patients, and thus lessen the present crowded condition of the house. The ground east of the asylum has been graded, preparatory to the erection of green and summer houses, and the general appearance has been greatly improved by planting trees and shrubbery, and changing the garden plot. The quantity of vegetables raised, considerably exceeds that of any previous year.

IMPROVEMENTS REQUIRED.

The expenditure for improvements the coming year need not be large, as most of those required can be obtained by Island labor; the principal outlay being for material. Of these, one of the most important is the forming an artificial pond or reservoir south of the asylum. A large spring opens into an excavation produced by quarrying, and by widening and extending this basin, a beautiful sheet of water can be obtained. It should be beneath the regular grade of the Island, and not more than four feet in depth; surrounded by a grass plot, and willows planted on its borders. With little labor (for the removal of the rock is almost sufficient) it might be made an attractive feature, greatly embellishing the grounds. But the great advantage would arise from its utility. A pipe leading from it to our forcing pump, would afford means for a never ending supply of water, so highly important on account of the liability of the Croton pipe which supplies the Island to be broken.

The erection of a green and two summer houses, east of the asylum, would answer the double purpose of enabling us to preserve plants through the winter, and afford to the patients a pleasant resort in summer.

I would recommend the building of a small work-shop, west of the cook house, in which may be placed a turning lathe, (already promised as a donation from a gentleman in the city,) with the various tools for iron and wood work. Some of the patients, mechanics of a high order, are willing to work at anything pertaining to their trade, but utterly refuse to engage in out door employment. Considerable saving would result thereby, in the way of repairs to the buildings and in the general improvements; but of still more consequence would be the advantage to the patients, from being employed.

We continue indebted, as in years heretofore, to various donors for contributions which serve to instruct and entertain the inmates. Messrs. E. Walker & Sons, No. 114 Fulton Street, presented several valuable books, the "Examiner" has come regularly to hand, and many other gifts, such as engravings, newspapers, &c., have been received from different sources.

If the mind of the sane requires variety and relaxation, how much more needful is it to that of the insane!

In many, one subject alone engrosses their whole attention, and if deprived of even the ordinary excitements, how

natural that the operations of the mind should be wholly subjective, until some striking objectivity impresses the senses. For the removal of the depressing passions, some other qualities must be called into action; and this principally, not by reasoning, but through something which will engage their time and attention. All the various objects for amusement cannot well be asked of your Honorable Board, nor should the expense be taken from the general fund appropriated by the city for the support of the institu-But from long experience with New York philanthropy, I am confident that everything requisite can be obtained, and with your sanction and approval, I propose to establish some systematic course for the attainment of this As at the Utica asylum, fancy articles made by the patients might be kept on sale under the direction of the matron, and if found necessary, an annual fair could be held in the fall. Besides, I would recommend to have a general invitation given twice a year to our citizens to visit the Institution, thus affording them the opportunity of becoming intimately acquainted with the situation and wants of the patients, which course would be undoubtedly productive of benefit to all.

The following are some of the proposed changes and additions to be embraced in this plan. The museum to be used as a reading room, accessible during the day to the quiet and most intelligent patients, the walls of which are to be adorned with engravings, maps, charts, and perhaps a few paintings, while upon the tables are to be kept newspa-

pers and periodicals. The shelves and cases to be filled with specimens of Natural History, minerals, shells, or any other objects of interest. A few boxes for perspective views, and a magic lantern, would afford a pleasing variation from the accustomed round of amusements.

In the library, an additional number of books is required, as very many of the patients read understandingly, and the perusal of a judicious selection is always attended with good results.

It is also desirable to have a melodeon for church service.

I feel confident that great advance in this direction would be made in a few months, could the charitably disposed see this matter in its true light. Who would be unwilling to contribute something or induce a friend to give aid, if assured that it would lessen the sorrow, or contribute to the recovery of a single one insane? Can there be a higher mission than thus to lend a helping hand to those stricken of the power of self-control?

The list of officers and employes given, varies little from that of the previous year, which, under the present arrangement, is conclusive that their course of action has been satisfactory.

No changes of importance have occurred in the mode of conducting the religious services. The same clergymen, Reverends Zetus Searle, C. E. Phelps, and Father Brady,

officiate, and entire harmony of feeling and freedom from sectarianism apparently exist. The influences resulting therefrom are salutary and conducive to great good.

The vacancies which occured early in the year by the appointments of Drs. Lansing and Corey, the one as Superintendent of Kings County Lunatic Asylum, the other as Senior Assistant Physician at Bloomingdale, were filled by the appointment of C. W. Packard, M.D., and R. L. Parsons, M.D., Assistant Physicians. The choice was judicious, both gentlemen being fully competent and having faithfully discharged their respective duties.

To our Committee is directly due in a great measure the many improvements of the year. The system adopted by them of visiting together the Institution on Saturdays of each week, examining and deciding matters presented for consideration, and keeping a record of all proceedings, has insured a thorough acquaintance with our wants, as well as harmony and efficiency of action. I regard it of great importance, and trust that hereafter it will also be continued. The Committee consisted of Governors Benjamin F. Pinckney, Tiemann, and Taylor, until the death of the last named, when the vacancy thus created was filled by Governor William T. Pinkney.

Gentlemen, I am deeply grateful to you for many acts of personal kindness, while your watchful attention to the wants of the insane has aided and your kind approval cheered me.

' May Divine Providence ever guide this noble charity, and protect its helpless inmates!

M. H. RANNEY,

Resident Physician.

NURSERY DEPARTMENT.

RANDALL'S ISLAND,

January 1st, 1858.

To the BOARD OF GOVERNORS,

Alms House Department:

GENTLEMEN: The Annual Statistics of the "Nursery and Farms" for 1857 is herewith presented for your consideration and inspection.

This statement gives the number of Girls and Boys in the Institution on the last day of December, 1856, and the number of admissions during the year 1857. It will also state the number of adults in the Department on the 31st day of December, 1856, and admissions in 1857. The number of children discharged upon orders given to parents and guardians, and for Indenturing, are herewith communicated. The transfers, elopements and deaths are also noted in this connection, giving a short condensed history of the department for the year 1857.

Children remaining Dec. 31st, 1856:
Girls
Boys 656—879
Admitted—
Girls 471
Boys 805—1276
2155
Discharged during the year 1857, which includes Trans-
ters, Elopements, and Deaths:
Girls 334
Boys
Number of children remaining Dec. 31st, 1857, 1197
The number of children discharged for Indenture during the year exhibit the following figures:
Boys 139
Girls 74—213
To parents and guardians—
Boys 390
(lirls 206—596
809

A smaller number of children have been taken from the Institution to Indenture in 1857 than in any previous year since the organization of the Board of Governors. The reason for this diminution may be attributed, I suppose, to the general derangement of business transactions and the "hard times."

The monthly and yearly admissions, discharges and deaths are more fully stated in a Table marked A, to which you are respectfully referred.

In Table B are exhibited the monthly and yearly admissions, denoting the age and sex of each child.

Table C has particular reference to the discharges, stating age and sex.

A gymnasium was erected in the several play rooms attached to the Institution in February last by your direction, which has contributed in a large degree to the physical development of the children, as well as to their enjoyment and sanitary improvement. They have, on several occasions, manifested grateful feelings to the Board of Governors, for their liberal appropriation of money to introduce the gymnastic exercises in their play rooms.

The House of Detention was completed and partly occupied early last spring. On the second day of November, 1857, John Fitch, Esq., Warden of the Penitentiary, transferred 42 prisoners to this building, and occupies it as a branch of the Penitentiary.

He has placed two keepers, viz., Mr. DeMott and Mr. Tierney, to supervise and work these prisoners. They are now and have been engaged in quarrying out stone and building a sea wall. The weather has been fine for out door labor,

and consequently they have been enabled to perform a large amount of work.

Mr. Fitch visits this Island as often as is necessary for a careful supervision of his officers and the men under their charge.

Venetian blinds have been placed on all the windows and doors of the several buildings connected with this Institution, and they add greatly to the comfort of the children in both summer and winter, as well as to the beauty and finish of the buildings.

About 12,000 square feet of brick walk has been laid down during the year, which is a great improvement on the old and worn out plank walk. Many little improvements have been made during the past year, such as grading the grounds, planting shrubbery and trees, taking down fences and old buildings, and removing others to better locations; all of which cannot be well enumerated in a communication of this kind. Two painters (inmates of the Department) have been employed for several months painting the inside of all the buildings. This work is nearly completed, having only the South Hospital to finish.

In the Table marked D, is shown the daily, monthly, and yearly expense of each inmate, embracing clothing, provisions, salaries, and miscellaneous articles.

I would respectfully call your attention to the School

House connected with this Institution. It is crowded to its fullest extent, and teachers and children are suffering for the want of proper ventilation and class rooms.

In the Primary Department there is one little class room "about 7x9," and in the senior there are three class rooms, each about the same size, all of which are inadequate and too limited for the wants of the Institution.

I would respectfully recommend that the Board of Governors take this matter under their own supervision, and have the buildings so modernized as to give not only class rooms, but improved ventilation, without the aid of windows, exposing the children to currents and sudden changes of atmosphere, and consequently disease.

Mrs. Ley and her corps of matrons are entitled to commendation for the faithful manner in which they have ministered to the wants of those under their respective charges: and I avail myself of the present occasion to make favorable mention of Mr. Ripley and other officers, for the interest they have on all occasions manifested for the Institution, and for the prompt manner in which they have discharged their several duties.

Floors have been relaid with the best quality of yellow pine in four of the Wards in the Hospitals, and several more Wards will require new floors at an early date, as the old ones are white pine of the poorest quality, and nearly worn out. For a full account of the Hospital diseases and deaths and the general health of the Inmates of the Institution, I will respectfully refer you to the Resident Physician's report.

The daily average number of children attending school during the year 1857, is 522; whole number taught, 1529. To the Committee on Randall's Island, viz., Governors Tiemann, Oliver, and Moloney, I tender my sincere thanks for their frequent visits to the Island, timely advice and coöperation in ministering to the wants of the inmates, and to the best interests of the Institution. To the Board of Governors I am deeply indebted for the liberal spirit they have always manifested toward the children of this, their best charity, and the promptness with which they have granted my requisitions, making the duties pleasant and easy, and every one around us cheerful and happy.

The following articles have been made by the larger girls when out of school, and under the supervision of Mrs. Ley, the principal Matron, aided by Miss Robinson:

Sheets	933
Aprons	950
Eye Towels	3564
Hand "	36
Pairs Suspenders	268
	5751

Our organized corps of forty boys, under the immediate supervision and instruction of Mr. Terry, a competent master tailor, have manufactured during the year the following articles of Clothing. These boys average about one hour in the morning before and two and a half hours after school.

Boys' Jackets	1556
Pairs Boys' Pants	
Boys' Pantalette Suits	5
Pairs Suspenders	374
" Men's Pants	4 8

NURSERY HOSPITAL.

To the GOVERNORS of the Alms House Department:

GENTLEMEN: The following is respectfully submitted as the Annual Report of the Nursery Hospital, for the year 1857:

\mathbf{Number}	of patients	remaining .	Jan. 1	lst, 1857		210
"	"	admitted d	uring	the year	r	1259
u	"	discharged	"	"		107 8
"	tt.	deceased	"	"		1 49
"	"	remaining	Jan.	1st, 1858		247

The per centage of mortality is 12. Average weekly census, 223.

Annexed hereto are tables showing the diseases causing death, and the ages of those who have died. Seventy per cent. of the deaths were of children three years of age and under. Constitutional depravity has determined its usual large proportion of the mortality. Sickness, particularly among the young children, has been severe, exanthematous diseases having prevailed during most of the past year.

Four cases of small pox were sent to the Small Pox Hos-17 pital last spring; since which no cases have occurred, notwithstanding its prevalence elsewhere.

The health of the inmates of the Nurseries at large, is good: the children are, for the most part, vigorous and cheerful, evidencing in their appearance judicious management and care on the part of those in charge.

I desire to call the attention of your Honorable Board to the necessity of increasing our Hospital accommodations. We need an enlargement of the North Hospital, where our patients are now much crowded, and without facilities for bathing, or the means of ventilation except by doors and windows.

My Assistants, Drs. Crook and Rives, are worthy of honorable mention for their professional skill and devotion to the interests of this Hospital.

All of which is respectively submitted,
HENRY N. WHITTELSEY,
Resident Physician.

NURSERY HOSPITAL, RANDALL'S ISLAND, January 1st, 1858.

PENITENTIARY.

Office of the Penitentiary,
Blackwell's Island, Jan. 1, 1858.

To the Honorable the BOARD OF GOVERNORS of the Alms
House of the City of New York.

GENTLEMEN:

I beg leave most respectfully to present to your Honorable Board the Ninth Annual Report of the Penitentiary Department, for the year 1857, accompanied by the following tabular statements of the number, ages, crime, and other information regarding the convicts.

The following is a tabular statement of the total number of Male and Female Court and Police Prisoners, received from the 1st of January to the 31st of December, 1857, inclusive:

		Total.		134,839	48

On reference to the respective tables of reception for the years 1856 and 1857, it may be seen that the total number of male court prisoners received in the former year was 1208, and of female court prisoners 267; whilst in the latter year, the number of male court prisoners received was 1420, and of female court prisoners 388; showing the increased number of court prisoners during the year 1857, as 212 males and 121 females, or as a total 333; all of

which, I think, may be attributed to the greater and more gradual increase of crime. A longer term of imprisonment has been very generally given to prisoners committed here this year, than had been usual previously, and although no perceptible decrease of prisoners has been, so far, effected, yet it is to be hoped the ensuing year will produce a change so much to be desired; and especially so, when the present prison accommodations are very far from being sufficient.

During the year, gangs of prisoners have been constantly and actively comployed in the necessary grading and cultivation of the grounds; the repairing and making and grading of roads, and the continuation of the building of good, substantial and durable sea wall, some seventy running feet of which has been built on the east side of the new Small Pox Hospital; six hundred and thirty running feet on the west side, from the landing there to the Penitentiary Hospital, also six hundred and fifty feet on the west side, running from temporary dock towards the boat house of the Penitentiary, making in all one thousand three hundred and fifty running feet, which has been built at an average of eight feet high, and four feet wide. of prison labor have been supplied to Bellevue Hospital, Out Door Poor Coal Yard, and Randall's Island; the last named place is still employing the daily labor of forty-two prisoners, under direction of Mr. Warden Eldridge, but who are, nevertheless, in the immediate custody of Mr. John Demott, quarrymaster, and Mr. Launcelot J. Tierney, Assistant Keeper.

The prisoners in the Blacksmiths' and Tinsmiths' Shops, who are in charge of Mr. Robert W. Hunt, have been busily employed in the manufacture of iron bedsteads, locks for doors of cells of the new wing of the prison, shoeing of horses, oxen, &c., and making tin ware, consisting of cups, dippers, pails, saucepans, pans, wash basins, coal hods, and the general jobbing of the Institution; an account of which has been sent to the store and credited.

The Shoemakers' and Tailors' Shops, in charge of Mr. R. McGee, have been engaged in the manufacture of shoes for the Institutions generally, and the mending of the shoes worn by the prisoners of this department. A more definite idea of what has been done in the shoe shop may be formed from the preceding debit and credit account of it, where you will find that after paying for all materials, &c., used, as well as the convict labor of 11,692 days, at the contract price of thirty-five cents per day for each convict, a balance of \$694 82 still remains in its favor. The tailors have been employed in making clothing for general use in the Institutions; a large number of suits of clothes for children on Randall's Island, and the mending of the clothing of the inmates of this department.

The prisoners in the Carpenters', Coopers', Wheelwrights', and Painters' Shops have been under the charge of Mr. George Bloomer. The carpenters have been occupied in the general jobbing and repairing for the Small Pox and Penitentiary Hospitals, as well as this Institution; putting up the necessary fittings for the Warden's residence, and

making coffins. The coopers, in making buckets, kids, night pails, &c., and general work of that nature. The wheelwrights, in making wheelbarrows, repairing carts, and such other general work. The painters have been generally employed for the benefit of this department.

The masons, in charge of Mr. Abraham Quick, have been employed in the erection of the warden's residence, the building of an addition to the carpenter's shop about to be used as a wash house, and the laying and building of the foundation of the new wing to the prison, and general repairs of the Institution.

The stone cutters, in charge of Mr. James Mahoney have been employed in cutting stone for the warden's residence, and the addition to the carpenter's shop, &c.

The quarrymen, in charge of Mr. Philip E. Brown, have been constantly employed in getting out the building stone for the warden's residence, addition to new wash house, the new wing of prison, and sea wall, also, for the additional story put on the Bellevue Hospital.

The Female Court Prisoners, during the year, have increased in numbers a little more than one half in proportion to those remaining here December 31st, 1856. They have been employed in binding for shoe shop, making and repairing garments for prison use, and for the children on Randall's Island a large number of dresses, &c.; knitting, &c., under the superintendence of Mrs. Ellen H. Halliwell,

the matron. The scrubbing and cleaning of the prison, &c., has also been done by a portion of them; and the general washing of the Penitentiary Hospital and this Institution has been done in part by police and court prisoners.

The large increase of both male and female court prisoners, demands the immediate action of your Honorable Board in hastening the erection of the new wing of the prison as much and as soon as possible; the present number of cells in prisons for males and females being only 496, whilst the number remaining here indicates the necessity of having 743 cells, or 247 more than at present provided. It is, therefore, evident that our only immediate remedy is to place two inmates in one cell, where practicable, to supply the deficiency of accommodations.

The enlargement of the building heretofore known as the carpenters' shop, but about to be used as a wash house, with a good drying room, will eventually prove a desired improvement; as the necessity of properly drying clothing in wet or damp weather has long been felt here, which I think will be satisfactorily removed by this arrangement; and it will not only be beneficial in this particular, but it will admit of our availing ourselves of this opportunity to fit up the first and second floors of the building still used as the work house, for large, good and commodious workshops where our surplus labor may be profitably employed by contract, and where much more facility may be had in classifying and arranging the younger and less hardened grade of prisoners, those here for the first offence and as-

Board for the promptness you will be a Committee on Penitentiary' no committee on Penitentiary' no committee on the committee of the committee on the committee on the committee on the committee on the committee of the committee

Wa'msley, the Deputy Warden, and the second in the discipline

Responsibly submitted by

JOHN FITCH,

Warden.

ALFRED CHANCELLOR, Baker.

N. P. ANDERSON, S. K.

WORK HOUSE.

OFFICE OF THE WORK HOUSE, BLACKWELL'S ISLAND, December 31st, 1857.

in GOVERNORS of the Alms House:

Specially, to report to your Honorable Body the number of persons remaining in the Work House on the 31st recember, 1857.

Number on hand January 1st, 1857, (inducing 298 at other departments) was

Received during the year	465	Fem. 554 2549	1022
	2266	<u> </u>	5369
Discharged " "	1476	2148	8669
Now on registers	7,50	810	1700
Fransferred to hospital and other de-	174	257	11 1
Remaining in building	43.5	623	1259

The undersigned would again call your attention to the suggestions named in my report for 1856, viz., the erection of a cook house, a carpenters' shop, the subdivision of the large rooms in the male hall into small rooms, similar to those on the ground floor; also two ventilators in the roof of both wings of the building,—all of which are very much needed.

The undersigned would respectfully state that the inmates have been kept judiciously at work, as far as circumstances would permit. The males have been employed in quarrying and grading, making and repairing shoes, making and mending garments of all descriptions for all the institutions except the Penitentiary, the carpenters, coopers, wheelwrights, painters, boat builders, blacksmiths, tinsmiths, have all been actively employed at their several vocations.

A large gang of men have been employed in the erection of a very substantial sea wall on the west side of the island, extending from the boat house to about midway to the asylum. Should the weather continue favorable during the winter, the same will be completed early in the spring.

The undersigned would also state, that the grading and laying out the grounds on the east side of the building is now completed.

The undersigned would state, that 200 females have been employed in knitting stockings since March last, in consequence of the discontinuance of the contract, formerly in operation, by the failure of Mr. Chapman, which is very much to be regretted, as it began to be a very respectable source of remuneration. It is to be hoped that the Board of Governors will apply to the Legislature for a law, making the commitment to the Work House more binding in its nature, and of more stability, thereby holding out an inducement for contractors to negotiate for their services.

I would again call your attention to the fact, that the entire building needs several coats of paint, and especially the dwelling part of the front building; all of which I trust will receive your early attention.

The Institution during the year has been remarkably healthy, and is now clean and in good order, ready for inspection at all times.

Our daily average number of inmates for 1856, was $625_{3}^{43}_{63}$; and for 1857, $729_{3}^{43}_{4}$; making an excess over previous year of 104 inmates daily.

I annex a table, showing the total Dr. and Cr. accounts for the year, from which you will perceive the cost of supporting this department has been about \$49,595 $\frac{8.6}{1.05}$.

In conclusion, permit me to tender my sincere acknowledgments to all the officers, male and female, for the faithful performance of the several duties imposed upon them.

TABLE

SHOWING THE DEBTOR AND CREDITOR ACCOUNT OF THE WORK HOUSE DEPARTMENT, FOR THE YEAR 1857.

4,

PER,

SUPERINTENDENT OF OUT-DOOR POOR.

NEW YORK, January 1st, 1858.

To the GOVERNORS of the Alms House:

The Superintendent of Out-Door Poor respectfully presents the accompanying statement and statistics for the year ending December 31st, 1857, by which it will appear that 6,689 adults and 9,496 children have been relieved by donations in money, and 21,527 adults and 36,099 children with fuel, showing an increase of 4,361 persons relieved with money, and an increase of expenditure of \$13,234 15, as will appear by the following account:

	1855.	1856.	1857.
Donations Children's nursing. Transportation of paupers and children Salaries Coal and wood Cartage of fuel, (for 1857, \$5,428 25,) clothing for children at nurse, expenses of stables,	\$29,217 88 9,900 25 1,647 78 14,286 86 58,167 28	\$19,171 81 10,774 75 1,288 87 14,414 24 85,107 07	\$24,700 28 10,585 47 2,479 21 14,658 69 42,687 64
stationery, &c	18,641 64	14,771 86	18,645 49
	\$121,861 14	\$95,522 60	\$108,756 78

This department has already experienced the effect of the almost total want of employment by the Mechanic and Laborer in the application, from a class who never before sought the Alms House Department for temporary relief; a large number having sought refuge in the institution on Blackwell's Island; and, from appearances, the demand from this particular class during the winter will exceed that of any former period.

Through this department 1,518 interments have been made from the city in the Cemetery at Ward's Island.

The records of this department for every application are kept with the same accuracy as heretofore, and are open to the inspection of your Honorable Board.

I would again call your attention to the want of proper accommodations for the business of this department. The large number of applicants, particularly during the months of January and February, completely filling the office from morning until night, strongly urges some change either in the removal of this department from its present location, or, that some means should be adopted for a proper ventilation and other facilities for the performance of the duties required of the Superintendent, clerks, and visitors.

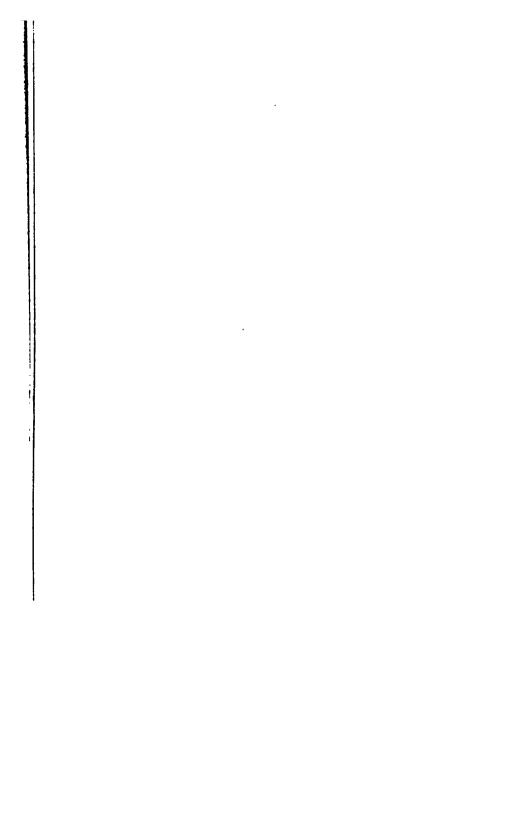

To the clerks and other employees of this department I renew my expression of their efficiency in aiding me in the
